

Specification Page 13 - Amended with Underlining  
And Strikethroughs

6, ~~the surface thereof to which the main cleaning portion~~  
~~is bonded (which is the lower surface)~~ a lower surface  
thereof bonded to the main cleaning portion may be  
subjected to surface treatment, such as degreasing,  
filling-up, or surface roughening.

As shown in Fig. 1, the base material sheet 6 may  
have, in its peripheral edge portion, a plurality of strips  
10 to form a ~~sub-cleaning~~ sub-cleaning portion. In this  
embodiment, the plurality of strips 10 are provided on  
either side of the handle mounting portion 2. The base  
material sheet 6 does not necessarily consist of a single  
sheet; it is also possible to form it by stacking together  
two or more sheets. When forming the base material sheet 6  
by stacking together a plurality of sheets, the sheets  
stacked together are not necessarily of the same kind; it  
is also possible to stack together sheets of different  
materials, colors, etc.

The fiber bundle 7 is formed as a sheet consisting of  
a large number of fibers bundled together, and a plurality  
of fibers may be collected together to a degree that the  
fibers do not become loose. However, the fiber bundle 7  
may also be one in which the fibers are partially connected

together by heat sealing, adhesion, etc. as needed. The fiber bundle 7 can be obtained, for example, by a method in which a large number of sheet-like bundles of filaments are successively bonded together at appropriate intervals in a direction perpendicular to the longitudinal direction of the fibers, and then the intermediate portions between the bonded portions are cut.
